

Environmental Policy

Zutari provides engineering, management, specialist technical and advisory services for government and private sector clients globally. Zutari aims to systematically consider potential environmental consequences of its activities and pursue continual improvement in its daily operations. To achieve this aim it is Zutari's policy to apply and maintain an effective environmental management system complying with the requirements of ISO 14001.

The objectives of our environmental management system are:

- ▶ To minimize potential loss of goodwill, credibility and reputation by proactively identifying, mitigating and monitoring environmental risks.

- ▶ To establish and monitor environmental management system objectives and targets.

- ▶ To implement measures to prevent greenhouse gas emissions and other pollution from our operations, to minimise our waste, usage of water, energy and other consumables.

- ▶ To meet environmental requirements of clients, applicable legal and regulatory requirements and standards by effectively assessing and planning all projects from inception through all phases of delivery.

- ▶ To collaborate with our clients to enhance the environmental performance of our project deliverables.

- ▶ To empower and train our staff to meet objectives and targets of our environmental management system.

We recognize that this policy requires a clear commitment by management to the application, regular review and continual improvement of the environmental management system and an appreciation by our staff that adherence to the system is everyone's business.

Teddy Daka
